## WHAT ARE OUR BACKFLOW COVERS MADE OF?

All of our backflow covers are made of very tough 22oz fabric that is coated with vinyl, making it waterproof with a high resistance to dirt, oil, salt, chemicals and UV. Made of top quality materials that will not tear, stretch, crack, rot or mildew. Outstanding strength!

## MATERIALS

INSULATION CORE: R-19 Polyfill Insulation

SEWING THREAD: Double-Stitched UV-Resistant Nylon

## CONSTRUCTION

All of our backflow covers are manufactured with fire and UV-resistant fabrics to give years of outdoor protection. Each seam is double sewn to seal out all weather elements. The side seams of some models have additional rivets to prevent splitting. Using the pre-installed grommet(s), the bag can be secured with a lock to prevent theft and other damage. Grommets and velcro seams can also be installed for devices that require a partially open top or side. All of the insulation is cut in whole pieces to minimize gaps that could cause freeze-ups.

## PROVEN QUALITY

All of our backflow covers have been tested to maintain water flow in static lines up to 10 hours in zero-degree temperature\*
