BACKFLOW BLANKET

“ Don't let freezing weather take a bite out of your back flow valve assembly in your water system. With a Backflow Blanket, you have a cost effective solution. The BackFlow Blanket was designed for an in conjunction with a major California municipal water district. And it has been tested and certified by California Irrigation Technologies.”

BEST CHOICE BFB manufactures the backflow blanket, an insulated canvas fabric designed to protect your backflow device from freezing weather. Our company was established in 1986 in Vallejo, Ca, 45 miles northeast of San Francisco. Best Choice BFB was formerly known as World Wide Canvas Products, it was later renamed to Best Choice BFB in 2004.

We are the leading supplier in California currently dealing with at least 90% of Irrigation and plumbing companies nationwide. Bestchoice BFB introduced the backflow blanket in 1986 supplying only to the city of Vallejo-Water Department. Ewing Irrigation Products became our first outside distributor. Since then, it quickly gained popularity after other Irrigation companies discovered it along side city streets.

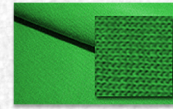

WHAT IS BACKFLOW BLANKET PREVENTION?

In water supply systems, water is normally maintained at a significant pressure to enable water to flow from the tap, shower etc. When pressure fails or is reduced as may happen if a water main bursts, pipes freeze or there is unexpectedly high demand on the water system, the pressure in the pipe may be reduced and may allow contaminated water from the ground, from storage or from other sources to be drawn into the system.

WHAT IS OUR BACKFLOW MADE OF?

All our backflow blankets are made of very tough 22oz Fabric that is coated with vinyl making it waterproof with a high resistance to dirt, mildew, oil, salt, chemicals and UV. Outstanding strength. Made of top quality materials, will not tear, stretch, crack, rot or mildew.

MATERIALS

Insulation Core: R-13 To R-30 Fiberglass Matte

Sewing Thread: Double-stitched UV-Resistant Nylon

CONSTRUCTION

All Backflow Blanket Insulation Products Are Manufactured With Fire And Uv-resistant Fabrics To Give Years Of Outdoor Protection. Each Seam Is Double Sewn To Seal Out All Weather Elements. The Side Seams Of Some Models Have Additional Rivets To Prevent Splitting. Using The Pre-installed Grommet(s), The Bag Can Be Secured With A Lock To Prevent Theft And Other Damage. Grommets And Velcro Seams Can Also Be Installed For Devices That Require A Partially Open Top Or Side. All Of The Insulation Used In Backflow Blanket Products Is Cut In Whole Pieces To Minimize Gaps That Could Cause Freeze-ups.

PROVEN QUALITY

All Of Our Backflow Blanket Products Have Been Tested To Maintain Water Flow In Static Lines Up To 10 Hours In Zero-degree Temperature*
